

Dashboards

Dashboards produce **top level summaries** of key data sets, allowing users to navigate data through interactive charts, tables and reporting/analysis tools.

With one click you can **access more details** - without the need for expert knowledge.

All data/reports **can be exported to other formats (Excel/PPT)** for easy inclusion in internal documents, or for additional analysis.

We offer **pre-defined dashboards** for Customer Experience Management or Brand tracking, or we can develop **bespoke solutions**.

Our multi-layered technology has a flexible web interface, which **can be used for information from ANY internal and external source**.

You can combine data from across your different information programmes – and we'll **custom design** your dashboards.

Interactive dashboards – either in a Fizz™ installation or 'Fizz™ for Sharepoint' portal – speed up understanding, analysis, reporting, accuracy and decision making.

Benefits include: Every chart, table and output can be manipulated via data segments

Can be exported directly into PowerPoint and Excel

Provides functionality for your data to be uploaded to this system - for a single consolidated view

Instant drill-down overview of core KPIs

Filter results

Analysis tool-kit to create your own charts and reports

Time series performance – with filters

Red alerts indicators picked up and processed daily

All data time series stamped, allowing analysis by week, by day, etc.

“The system has revolutionised the way we work. It has given us a central resource for information, and the insight the system offers us now dictates the information we provide to our business.”

Katrina Rochowski, Internal Communications, Orange (Global Telecom)
