

Fizz.im: Fizz for SharePoint

“Fizz solutions can be integrated into SharePoint as turn-key plug-ins – working with and augmenting your existing software investment

Fizz for SharePoint

Every **Fizz™** tool can be **seamlessly implemented** with MS SharePoint as a plug-in, resulting in minimal IT intervention on an existing implementation, so you can **choose to improve** your SharePoint system – even across multiple SharePoint sites.

Feature Overview: Advanced Search

Our powerful Advanced Search tool can be **customised** to meet your specific search needs, so every search can deliver **more relevant** results, quickly and effectively.

Feature Example: Advanced Search - Details

Any non-multimedia document is copied to PDF, then Advanced Search uses your **customised search algorithm**. The results are summarized – right down to the level of individual paragraphs for **quick, pinpoint relevancy**. The fields captured and searched can be altered through the admin tool-kit within **Fizz™**, providing you with **maximum flexibility**.

Feature Overview: Site Administration – Options

Fizz™ allows Administrative users to **easily manage** different options including: User registration
Deletion & password changes
User viewing permissions by individual document
Tracking individual use of each document by each user
Editing content
Document content amendments
Updates and deletions
Newsletters to targeted groups

“ Fizz means we get far greater value from each of our (market research) studies. There's absolutely no risk that a project will simply sit on the shelf ”
